FourxClub: A Practical Guide to Institutional-Based Intraday Trading

 **Introduction: Why Most Traders Lose (and How We Are Different)**

The vast majority of traders fail because they rely solely on technical tools and indicators without understanding the fundamental drivers of market movement. They don't know why the market is moving from a specific point.

Our Institutional Edge

Our strategy is distinct because it is based on the methods used by institutions. Large institutional players primarily trade using Quants and Order Flow analysis, tools that are typically unaffordable for retail traders.

Our Solution: We have developed a proprietary strategy that allows you to leverage the concepts of institutional tools within free platforms like TradingView, achieving an estimated 70-80% accuracy comparable to institutional methods.

The Core Framework: Time, Liquidity, & Structure

This document introduces the foundational principles of our trading approach. It is designed to build understanding, not dependency.

Mastery comes from screen time, not secrets.

1. How the Market Really Moves (A Simple Truth)

- Most retail traders believe price moves because of:
- Indicators
- Patterns
- News
- Predictions
- In reality, the price moves for one reason only: Liquidity.
- Liquidity represents areas where a large volume of orders exist, including:
- Stop-loss orders
- Pending entry orders
- Breakout entries
- Emotional decisions

Large participants (institutions) cannot enter or exit the market without sufficient liquidity. Therefore, the market's initial purpose is to move toward liquidity first, and then show its true direction.

2. Defining "Liquidity" in Our Framework

In our approach, liquidity refers to obvious points on the chart that attract orders:

- Session highs and lows
- Previous range highs/lows
- Equal highs / equal lows (EHs/ELs)
- Obvious support & resistance zones
- Consolidation boundaries

Crucial Note: We do not trade toward liquidity blindly. We observe what price does after liquidity is taken.

3. Time Is Not Optional (The Volume Catalyst)

Liquidity only becomes relevant when real volume enters the market. This high-volume activity is concentrated around specific session transitions, not randomly throughout the day.

We focus on the following key trading windows:

- Frankfurt Open
- London Open
- London Fix (The 3 PM London time "Window")
- New York Open

Rule of Thumb: Direction without consideration of time equals noise (mean-reversion, ranging, traps)

4. Session-Based Liquidity Framework (Instrument Rhythms)

Not all markets move the same way at the same time. Each instrument has a preferred session where institutional volume is active and liquidity is efficiently engineered. Outside these windows, price is often random, mean-reverting, or deliberately misleading.

Understanding when an instrument is designed to move is as important as knowing where liquidity sits.

Forex Majors

Primary activity occurs during London Open and New York Open.

Frankfurt frequently performs early liquidity sweeps and false expansions.

London establishes directional intent.

New York either continues the London move or reverses it after London liquidity is consumed.

Gold (XAU/USD)

- Best respected during London Open and New York Open.
- Asian session typically forms accumulation or manipulation ranges.
- Frankfurt often targets prior highs/lows.
- London creates structure.
- New York delivers displacement and range expansion.

US Indices (NASDAQ, S&P 500, Dow)

- Dominated by the New York session.
- Pre-NY price action is usually positioning and liquidity building.
- London moves are often corrective or deceptive.
- True intent appears after NY Open when real volume enters.

Key Principle

- Trading an instrument outside its dominant session removes the time variable from your analysis, reducing probability.
- Liquidity tells us where.
- Time tells us when.
- Structure tells us how.
- Only when all three align does the market reveal intent.

5. The Role of Manipulation

- Market manipulation is not random; it is a calculated action designed to gather liquidity.
- Manipulation typically appears as:
 - Sudden spikes or sharp moves
 - False breakouts and reversals
 - Quick stop-loss runs (wicking through a key level)
 - Emotional, oversized candles
- Its Purpose: To force retail traders into the wrong position (e.g., selling near the low just before a reversal).
- Our Strategy: We do not fight manipulation. We wait for it to finish.

6. Structure: The Market's Confirmation Tool

- After liquidity is swept, we wait for structure to confirm the institutional intent. Structure answers one critical question: Has control changed?
- We look for clear signs of confirmation:
 - Breaks of short-term structure (e.g., break of an internal lower high)
 - Acceptance (closing) above or below key levels
 - Clean continuation moves, not just wicks
 - Structure confirms intent, it is not a prediction.
- 🧠 Execution & Mindset

7. Why We Use Minimal Indicators

- Indicators do not predict the market; they are a secondary tool used to filter decisions.
- We use very few tools because:
 - Too many indicators create conflicting signals.
 - Price and time already tell the most important part of the story.
 - Indicators are used for confirmation, never as the primary signal for entry.

8. Risk Is the Real Strategy

- A good setup can still result in a loss, but a bad risk plan always loses in the long run.
- Key Risk Control Principles:
- Maintain the same risk percentage per trade.
- Follow the same process every day.
- Avoid emotional sizing (increasing/decreasing risk based on feeling).
- Zero revenge trades.
- Consistency comes from risk control, not win rate.

9. Why This Is a Framework, Not a Signal System

- This approach is designed to be robust:
- It adapts to different market conditions.
- It works across various instruments (Forex, Indices, Commodities).
- It evolves and improves with screen time.
- There are no fixed, "copy-paste" entry signals. We train you to read the full market context, not candles in isolation.
- 10. Final Thought
- This document provides you with: the logic, the structure, and the mindset.
- What it does not provide: exact entries, mechanical rules, or shortcuts.
- Those are earned through disciplined observation and execution. The market rewards patience, not urgency.

10. Final Thought

- This document provides you with: the logic, the structure, and the mindset.
- What it does not provide: exact entries, mechanical rules, or shortcuts.
- Those are earned through disciplined observation and execution. The market rewards patience, not urgency.

Ready to Trade the Institutional Way?

The 4x Club Advanced Trading Course converts the framework you just learned into a high-probability, step-by-step mechanical system.

What You Get in the Full Course:

The Institutional Tool Walkthrough: How to use the free institutional-grade tool on TradingView for your 70-80% accuracy edge.

The 3-Step Execution Checklist: Our precise entry/exit rule-set for executing the Liquidity/Time/Structure framework.

Live Market Examples: 10+ hours of trading sessions and market breakdowns on GER30, NASDAQ, and Gold.

Exclusive Community Access: Daily analysis and Q&A sessions to fast-track your screen time.

Stop Trading Blind. Start Trading Smart.
